

**SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR A
CONFIDENTIAL SUPPLY CHAIN MANAGEMENT INTERFACE**

5

ABSTRACT

A system, method and computer program product are disclosed for providing a network-based supply chain interface capable of maintaining the anonymity of supply chain participants in the supply chain. Data is received via a network from a plurality of supply chain participants of a supply chain. Each of the supply chain participants is assigned with an identifier and the data for each of the supply chain participants is listed utilizing the identifier to preserve the anonymity of the supply chain participants.
